

Likhitha Shrinivas Gudalwar

Front-End Software Engineer | React, TypeScript, Angular | 4+ Years Experience

Malden, MA (open to relocation) | likhithagudalwar@gmail.com | (978) 703-3284 | [linkedin.com/in/likhitha-gudalwar](https://www.linkedin.com/in/likhitha-gudalwar) | github.com/Likhitha2502

WORK EXPERIENCE

Front-End Software Engineer

July 2022 – Present

AES Corporation — Intellinet Network Control Center (INCC)

- Designed, developed, and maintained responsive, high-performance front-end features in React and TypeScript, eliminating freezing on a data-heavy geo page by implementing React virtualization within a Mapbox (react-map-gl) interface, rendering 11,000+ item datasets in ~2 seconds once data was received from the backend.
- Partnered with backend engineers, UX designers, product managers, and business analysts to translate requirements into polished, cross-browser-consistent user interfaces, delivering features across Scrum sprints and, following the team's transition to a Kanban workflow, in bi-weekly retrospectives to continuously improve team process.
- Built and maintained cross-browser React.js and TypeScript components integrated with RESTful APIs via fetch and Axios, keeping behavior consistent across Chrome, Firefox, and Safari.
- Drove front-end architectural decisions by building and maintaining 75+ React components over the project's 4-year lifecycle and consolidating recurring UI patterns (modals, icons, form components) into shared, global components, reducing duplicate code across an estimated 25% of the application's UI.
- Resolved performance bottlenecks on slow-loading pages by implementing front-end pagination alongside code-splitting, memoization, and lazy loading, accelerating interactions and streamlining bundle size.
- Wrote unit and integration tests with Jest, reaching over 80% coverage on feature slices, and reviewed teammates' pull requests to catch bugs before they reached QA, supporting code quality and knowledge sharing across the team.
- Maintained persistent WebSocket connections to receive real-time queue and status updates from field units transmitting over RF, stabilizing async state handling for import/export API flows via RxJS and Redux-Observable.
- Maintained a clean, production-ready codebase as part of the team's CI/CD workflow by managing GitLab feature branches, pull requests, and code reviews.

PROJECTS

ProcastiNot — Task Manager with Focus Timer, Frontend Lead

Mar 2026 – Present

- Led front-end development as Frontend Lead on a 3-person team, driving UI/component architecture decisions and coordinating API integration for a task management app with built-in focus-timer sessions.
- Engineered the full task lifecycle (create, edit, delete) through modal forms supporting priority levels, due dates, and status, with sorting and filtering across the task list.
- Secured user data with JWT-based authentication covering registration, login, and forgot-password flows, validated on both client and server.
- Managed application state with Redux (react-redux) and tested reducers, actions, selectors, and epics with Jest, keeping coverage above 85%.
- Rebuilding the frontend in Angular 19 (in progress) using NgRx (Store and Effects), Angular Material, and Reactive Forms.
- Evaluated UI color contrast, text readability, and overall usability for users with accessibility needs by testing the app with browser accessibility tools during system testing.

Readopotamus — Reading Tracker, Backend Developer

July 2026 – Present

- Designed REST APIs with Java and Spring Boot enabling secure, private access to each user's reading data, and modeled a normalized PostgreSQL schema supporting five reading formats with page-based and percentage-based progress tracking.
- Integrated the Open Library REST API for book search and metadata, with graceful handling of incomplete metadata and API failures.

EDUCATION

Harrisburg University of Science and Technology

July 2025 – Present

M.S., Computer Information Sciences

University of Massachusetts Lowell

June 2022

B.S., Computer Science

TECHNICAL SKILLS

- Frontend: JavaScript (ES6+), TypeScript, React.js, Angular 19, Node.js, HTML5, CSS3, jQuery, Responsive Web Design
- State Management & Reactive Programming: Redux, Redux-Observable, RxJS, NgRx (Store, Effects)
- Testing & Tooling: Jest, Playwright, Git, GitHub, GitLab, Docker, NPM/Yarn, CI/CD Pipelines, Agile (Scrum, Kanban)
- APIs & Backend (Familiar): RESTful APIs, SQL, PostgreSQL, MySQL, Java, Spring Boot, PHP
- CS Fundamentals: Data Structures & Algorithms, Object-Oriented Design, Complexity Analysis, N-Tier Architecture
